Assessment and Collaboration at Work at Nicholson Catholic College

Students in Mr. Burchat's grade 11 and 12 computer programming class presented one of their culminating tasks to Mr. Hartnell's grade 3 class from St. Michael Catholic School. The high school students were required to design a video game that would improve basic numeracy skills for students in grades two to four. The computer students had to incorporate music, animation, proper pace, intuitive play, a reward system, and most importantly fun so that the child would want to play again. The NCC students proudly stood back and let the grade three students take their seat. The younger students played a variety of games and provided feedback on each. Mr. Burchat's students take that feedback and modify their games before they hand it in to be assessed by Mr. Burchat. Mr. Burchat and his students would like to thank Mr. Hartnell and his students for providing such constructive and timely feedback.
